

Global Diabetes Prevalence Trends (2011-2024)

Overview

This report analyzes global diabetes prevalence data from Our World in Data, comparing rates in 2011 and 2024 to identify countries with the largest increases.

```
library(dplyr)

diabetes_data <- read.csv("https://ourworldindata.org/grapher/diabetes-prevalence.csv?v=1&csvType=full&")
diabetes_data <- diabetes_data %>% rename(diabetes_pct = sh_sta_diab_zs)

diabetes_2011 <- diabetes_data %>% filter(year == 2011)
diabetes_2024 <- diabetes_data %>% filter(year == 2024)

comparison <- inner_join(diabetes_2011, diabetes_2024, by = "entity")
comparison$change <- comparison$diabetes_pct.y - comparison$diabetes_pct.x
comparison <- comparison %>% arrange(desc(change))

print(head(comparison[, c("entity", "diabetes_pct.x", "diabetes_pct.y", "change")], 10))

##               entity diabetes_pct.x
## 1              Pakistan      7.90000
## 2                Samoa      7.70000
## 3      French Polynesia      8.60000
## 4        New Caledonia      8.60000
## 5                 Guam      8.60000
## 6                Algeria      7.00000
## 7                 Sudan      8.60000
## 8      Dominican Republic      8.10000
## 9 Middle East, North Africa, Afghanistan and Pakistan (WB) 10.72255
## 10                Syria      9.90000
##   diabetes_pct.y   change
## 1      31.40000 23.50000
## 2      25.40000 17.70000
## 3      22.80000 14.20000
## 4      22.00000 13.40000
## 5      20.30000 11.70000
## 6      17.50000 10.50000
## 7      19.00000 10.40000
```

```
## 8      17.60000  9.50000
## 9      20.13691  9.41436
## 10     19.00000  9.10000
```

Top 10 Countries by Increase

The chart below shows the 10 countries with the largest increase in diabetes prevalence between 2011 and 2024.

```
library(ggplot2)
top10 <- head(comparison, 10)
ggplot(top10, aes(x = reorder(entity, change), y = change)) + geom_col() + coord_flip() + labs(title = "Top 10 Countries: Increase in Diabetes Prevalence (%)")
```
